# Installation Steps (Android Only):

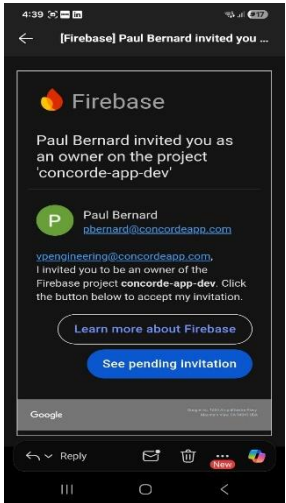

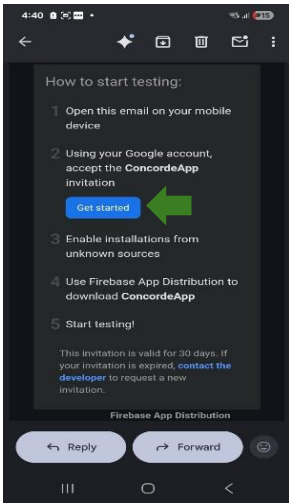

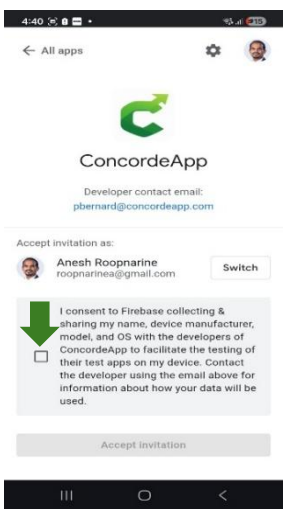

Step 1:
After scanning QR code. Enter email & select sign-up.

Step 2:
Scroll down to step

Step 3:
Select 'Get started' button to accept invitation.

**Step 4:**
Select checkbox to give consent to Firebase

Step 5:
Select Download
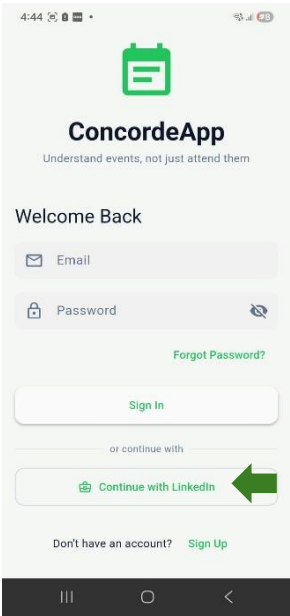

Step 6:
Select Install

Step 7:
Select Scan

Step 8:
App is being scanned

Step 9:
Select Install

Step 10:
Select Continue with LinkedIn Button

Allow Unknown App Installation

For Modern Android Versions (Android 8.0 Oreo and higher)

Modern Android versions use a per-app permission model, which is more secure than the old global setting.

1. **Open** the **Settings** app.

2. Navigate to **Apps & notifications** (or simply **Apps**).

3. Tap on **Special app access** (you may need to tap **Advanced** first on some devices).

4. Select **Install unknown apps**.

5. You will see a list of your installed apps. **Tap** on the specific app you are using to download or open the APK file (e.g., **Chrome**, **My Files**, or **Files**).

6. **Toggle on** the **Allow from this source** (or **Allow app installs**) switch.

7. Return to your download location and attempt to install the APK file again.

For Older Android Versions (Android 7.0 Nougat and below)

Older versions use a single global setting for all sources.

1. **Open** the **Settings** app.

2. Navigate to **Security** (or **Lock screen and security**).

3. Look for the **Unknown sources** option and **check** the box or **toggle** the switch to enable it.

4. Tap **OK** or **Allow** on the prompt message to confirm your choice.

5. You can now return to your download location and install the APK file.
